

# Planning for Resilient Coastal Communities

WELCOME

Port Austin – October 15, 2019

- Introduction to Master Planning and Coastal Resilience
- Presentation – What is Community Resilience
- Activity 1 – Preserve, Improve, Create
- Presentation – Great Lakes Coastal Shoreline Dynamics
- Presentation – Placemaking for Community Sustainability
- Activity 2 – Mapping assets & opportunities
- Presentation – Legal Complexities: Shoreline and the Public Trust Doctrine
- Activity 3 – Project prioritization
- Next steps

# A Unique Master Planning Effort Planning for a Resilient Port Austin

A different way of viewing the master plan process, focusing on the cooperative preparation, adaptation and the creative development of **community systems in the face of changing conditions and circumstances.**

## What is a Master Plan?

A formal assessment of the strengths & weaknesses of the community

Through civic engagement, it's the expressed vision for the future of the community

A formal policy guide or "blueprint" for community development

A flexible document - should respond to changing conditions, innovations, new information

## How is a Master Plan used?

Basis for land use regulation (e.g., zoning)

Guides decisions on development and public capital improvements

Provides support and improves eligibility for potential projects

- Grant Requests
- Millage
- Public/Private Partnerships

Provides a guide for the conservation of community resources and quality of life

Positions community to meet future challenges

# Building Resiliency In Coastal Communities

## Funding Provided By Michigan Coastal Zone Management Program

The PURPOSE of this program:

- Study and analyze the potential coastal hazards along the Great Lakes
- Engage citizens, public officials and community stakeholders
- Help inform local land use policy and future master planning efforts
- Create hazard-ready coastal communities

# What is Community Resilience?

The ability of a community to anticipate, accommodate and positively adapt to or thrive amidst changing climate conditions or hazard events and enhance quality of life, reliable systems, economic vitality and conservation of resources for present and future generations.

Urban Sustainability Directors Network

# Establishing a Framework for Building Community Resilience

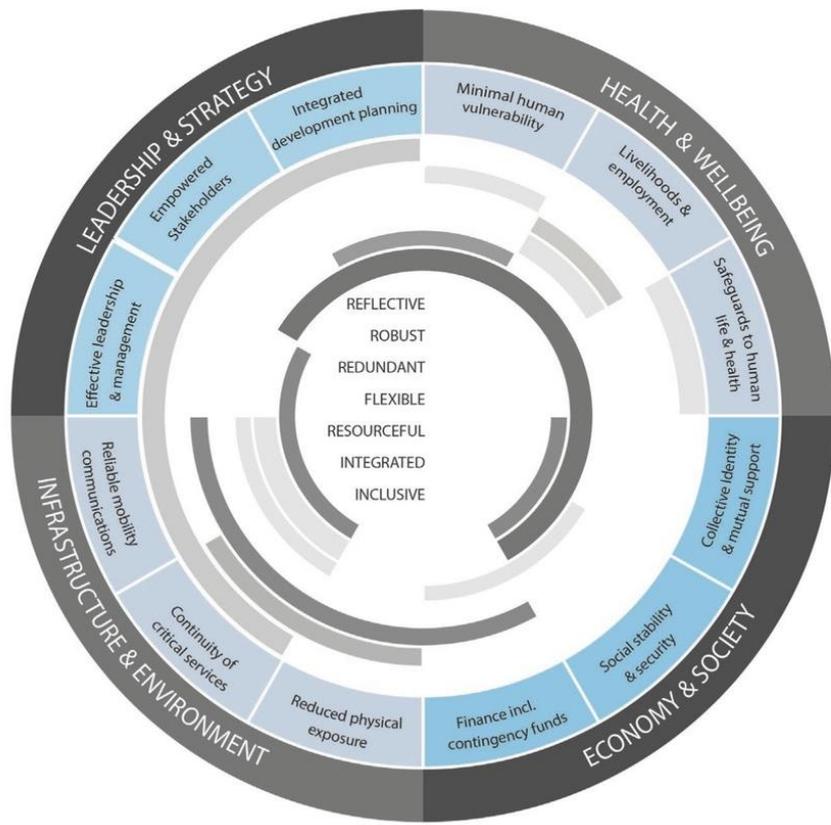

Image: ARUP and the Rockefeller Foundation

## *Resilient Systems*

- Local Governance and Leadership
- Infrastructure (green & grey)
- Transportation
- Local Food Systems
- Housing and Neighborhoods
- Natural Resources
- Public Health
- **Coastal Processes**
- Energy
- Economy and jobs

*A System is an interconnected set of elements that is coherently organized in a way that achieves something.*

*Thinking in Systems, Donella Meadows (2008)*

# Establishing a Framework for Building Community Resilience

## Efforts at the Federal Level

- EPA - Collecting data, technical assistance, outreach and policy
- CDC - Programs in Environmental health, infectious disease
- DOD - Climate Change Adaptation Roadmap
- NOAA - Climate information and data
- FHWA – Technical assistance to improve resilience and reduce energy use and emissions
- DOE – Supports research and innovation to invest in alternative energy

## Efforts at the State Level

- Michigan Climate Action Plan (2009)
- Michigan Army National Guard
- Michigan Department of Environmental Quality
- Michigan Department of Health and Human Services
- Michigan Department of Natural Resources
- Michigan State Police
- Michigan Economic Development Corporation
- Michigan Public Services Commission
- Michigan Public Governmental/Planning Associations ( MAP, MML, MTA)

# Establishing a Framework for Building Community Resilience

## Efforts at the Local Level

### EXISTING PLANS

Communities with Climate Actions Plans, Resiliency Plans, and/or Sustainability Plans, either in process or adopted as of February 2017.

- Alger County
- Baraga Township
- Bay City
- Beaver Island
- Benton Harbor
- Camp Grayling Joint Maneuver Training Center
- City of Ann Arbor
- City of Dearborn
- City of Detroit
- City of East Jordan
- City of Farmington Hills
- City of Grand Haven
- City of Grand Rapids
- City of Hancock
- City of Hazel Park
- City of Holland
- City of Kalamazoo
- City of Ludington
- City of Marquette
- City of Monroe
- City of Muskegon
- City of Southgate
- City of St. Joseph
- City of Traverse City
- City of Trenton
- City of Ypsilanti
- Coastal Macomb County
- Fort Custer Training Center
- Frenchtown Charter Township
- Grand Haven Charter Township
- Hamlin Township
- Meridian Township
- Monroe Charter Township
- Muskegon County
- Pere Marquette Charter Township
- Selfridge Air National Guard Base
- Village of Northport
- Village of Sebewaing

# Establishing a Framework for Building Community Resilience

## SIX CLIMATE-CHANGE CONCERNS FOR MICHIGAN

<p><b>1</b></p> <p><b>EXTREME HEAT</b></p> 	<p><b>2</b></p> <p><b>HEAVY RAIN AND FLOODING</b></p> 	<p><b>3</b></p> <p><b>SEVERE WINTER STORMS</b></p> 
<p><b>4</b></p> <p><b>COASTAL DYNAMICS</b></p> 	<p><b>5</b></p> <p><b>NATURAL ECOSYSTEMS</b></p> 	<p><b>6</b></p> <p><b>AGRICULTURE AND FOOD SYSTEMS</b></p> 

# What is Coastal Community Resilience?

## Responding To:

1. Shocks. Shocks are typically considered single event disasters, such as a severe storm and flooding (impacts associated with climate change)

Metro Detroit – August 2014

Houghton – June 2018

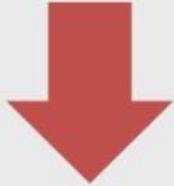

Photo Credit: Sonya Lampre  
Detroit Free Press

2. Stresses. Stresses are factors that pressure a community on a daily or re-occurring basis, such as fluctuating lake levels

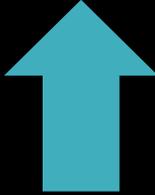

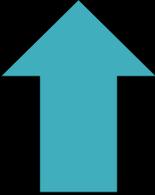

# Great Lakes Observed Regional Changes

Average Temperature	Total Precipitation	Heavy Storm Precipitation	Great Lakes Ice Coverage	Frost-free Season
 <b>2.0°F</b> 1900-2012	 <b>11%</b> 1900-2012	 <b>37%</b> 1958-2012	 <b>71%</b> 1973-2010	 <b>9 Days</b> 1958-2012

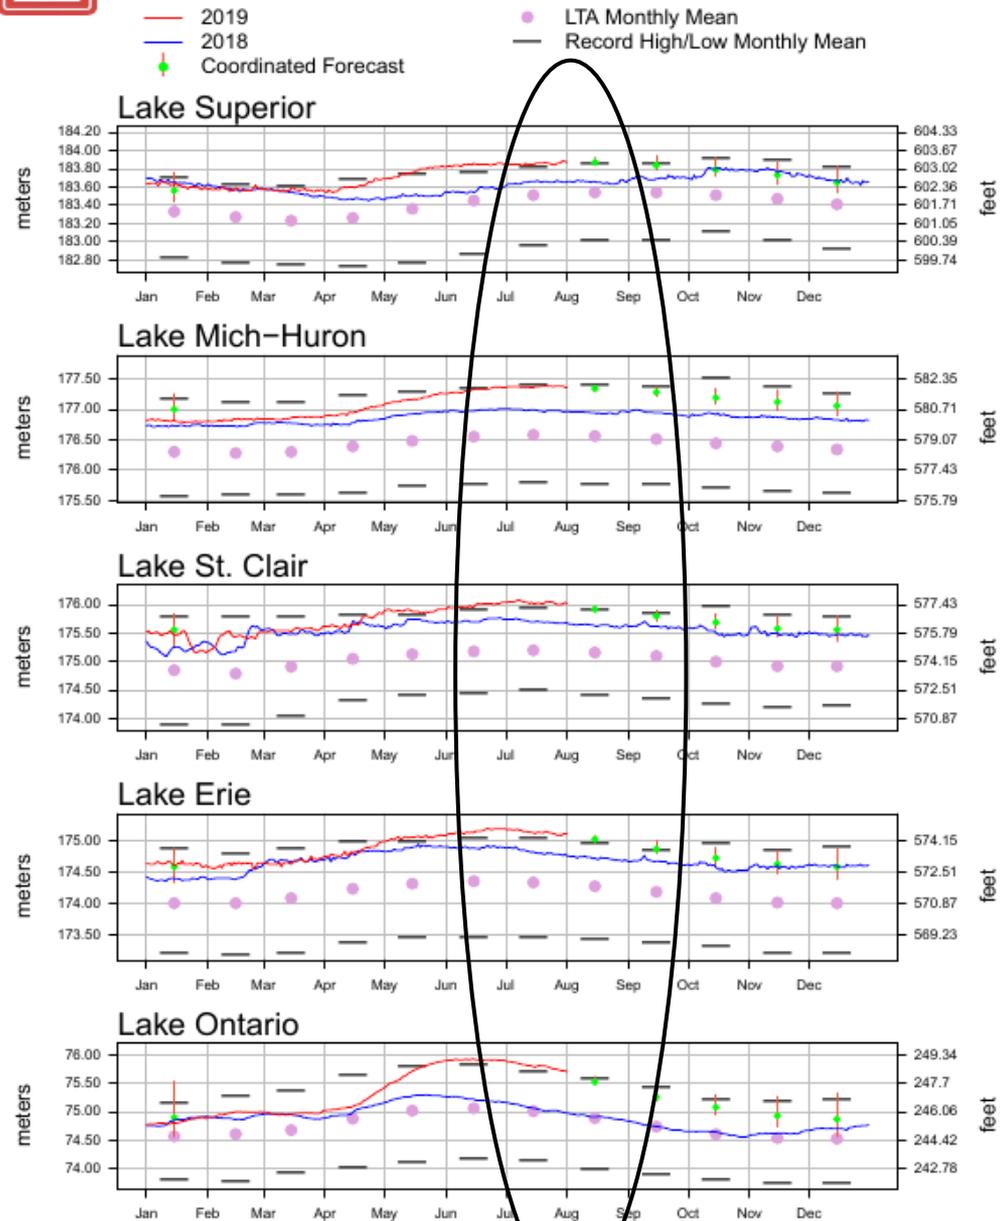

# Projected Great Lakes Regional Changes

Average Temperature	Total Precipitation	Heavy Storm Precipitation	Number of Hot Days (T > 90F)	Frost-Free Season
 <b>3.5 – 6.0 °F</b>	 <b>5 - 15 %</b>	 <b>10-60%</b>	 <b>0-90 Days</b>	 <b>30-70 Days</b>
2041- 2070	2041-2070	2041-2070	2041-2070	2070-2099

# Current Coastal Dynamics and Climate Trends

## Daily Great Lakes Water Levels

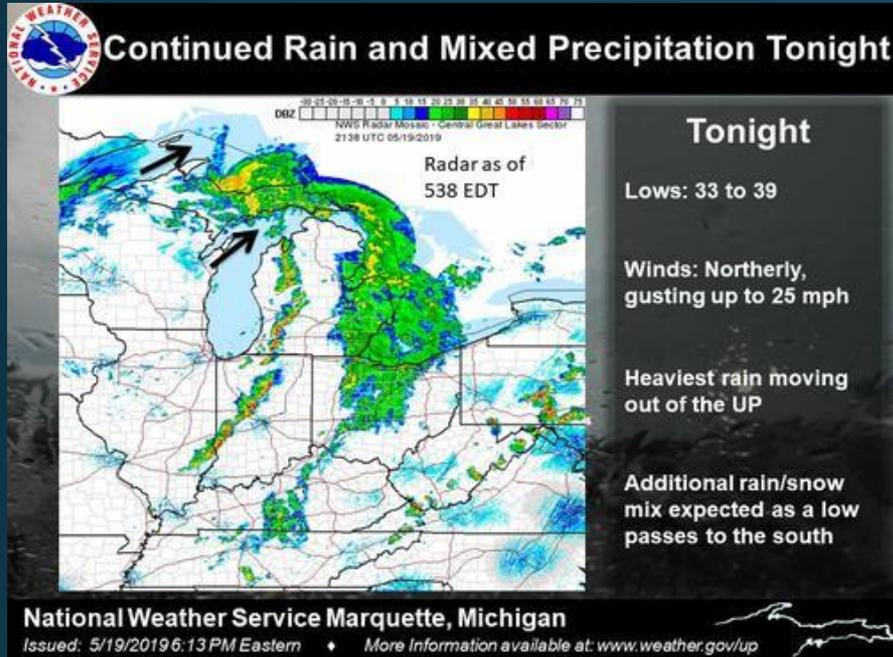

Lakewide average levels are based on a network of water level gages located around the lakes. LTA and record levels are computed from a period of record of 1918 to 2018. Elevations are referenced to the International Great Lakes Datum (1985).

Updated 2019-08-05

# Great Lakes Water Levels Are Influenced by Three Factors

1. Rain and Snowfall Over the Lakes
2. Evaporation Over the Lakes
3. Runoff the Enter the Lakes from the Surrounding Land through rivers and Tributaries

# Persistent Upper Air Pattern Is Bringing Active Storms and Heavy Precipitation Across the Midwest Basin

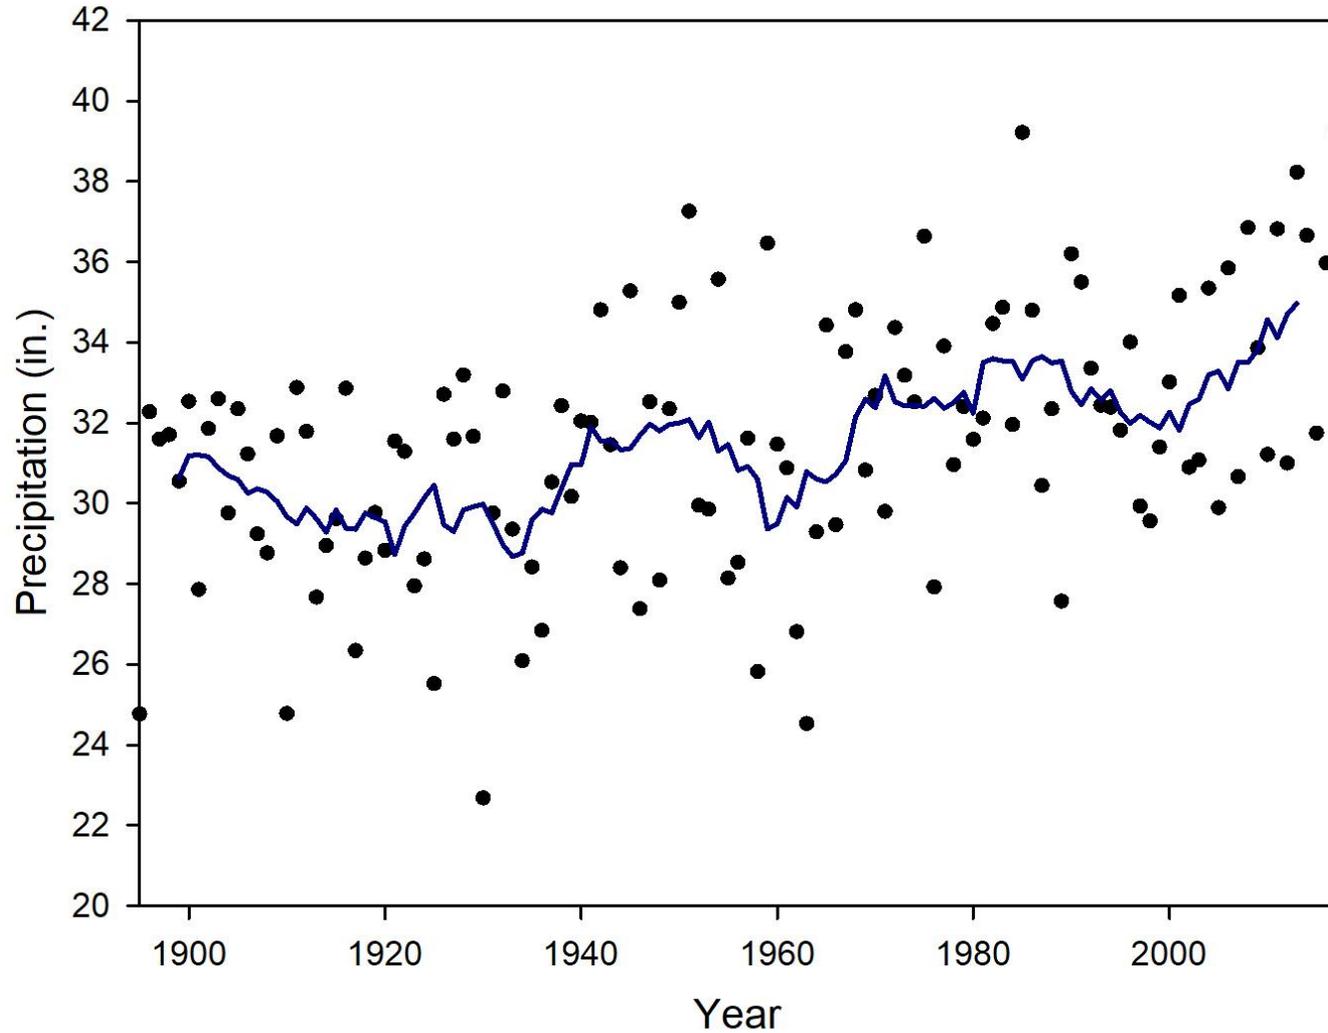

June 2019

# Michigan Climate Trends

Annual Precipitation vs Year, Michigan  
1895-2017

# Activity One

Preserve, Improve, Create

# What we heard...

## Economy

Port Austin is not currently capitalizing on the winter months

Weather has a direct influence on the economy

“Great place to live, tough place to make a living”

Not enough seasonal workers in the summer because permanent job growth largely in Bad Axe

**Low number of businesses**

Seasonal residents not looking for new development

**Well-attended farmers market**

Development in Bad Axe is drawing money away from Port Austin

**Seasonal economy** Manufacturing becoming more automated

Many Port Austin residents are employed in Bad Axe

Many people leave during the winter

Manufacturing industry – difficult to find employees

# What we heard...

## Coastal Resilience

Invasive species potential

Ordinance does not address seawalls

No data on septic systems in the Township, Village is on sewer

Health department closes beaches often after holiday weekend because of contamination

Community is accustomed to the fluctuating lake levels

Nothing in the zoning ordinance on setback requirements from water

Seawalls are failing

Runoff into creeks, harbor from farms

# What we heard...

## Housing

Low number of permits applied for to build

Cost of new construction is high

Seasonal residents want to stay in their home or downsize

Almost no affordable rental housing during peak tourism for seasonal workers

A lot of recent upgrading of the housing stock

More new builds – demand is high for new housing

Lack of affordable housing for young families

County allowing pole structures to be built as housing

Local ownership (year-round) is increasing while non-local ownership is decreasing

Blighted properties - both commercial and residential

# What we heard...

## Community Amenities & Services

Two public art galleries

Turnip Rock

Three hospitals within 30 miles

Strong non-resident tax base to support millages

Low civic participation from young people

Community does not have many young people to staff emergency services

Ambulance is a satellite location; police is paid position; fire department is volunteer

Not enough staff for ambulatory services

North Huron School recently redone/upgraded

Community has strong recreational assets – beaches, ball fields, library, playhouse, museum, golf

Community lacks swimming pool, gym, sporting facilities

# What we heard...

## Transportation

### Repaving every year

Home to a number of trails – bird, water, preserve, Barn Quilts Trail

“Local public bus system is like Uber” – Thumb Area Transportation

### Community connected by two state highways

Community wants to work with external transit agencies to make transfers outside the region easier

### Great road commission

Huron County residents largely support road millages

Lack of bicycle paths, trails

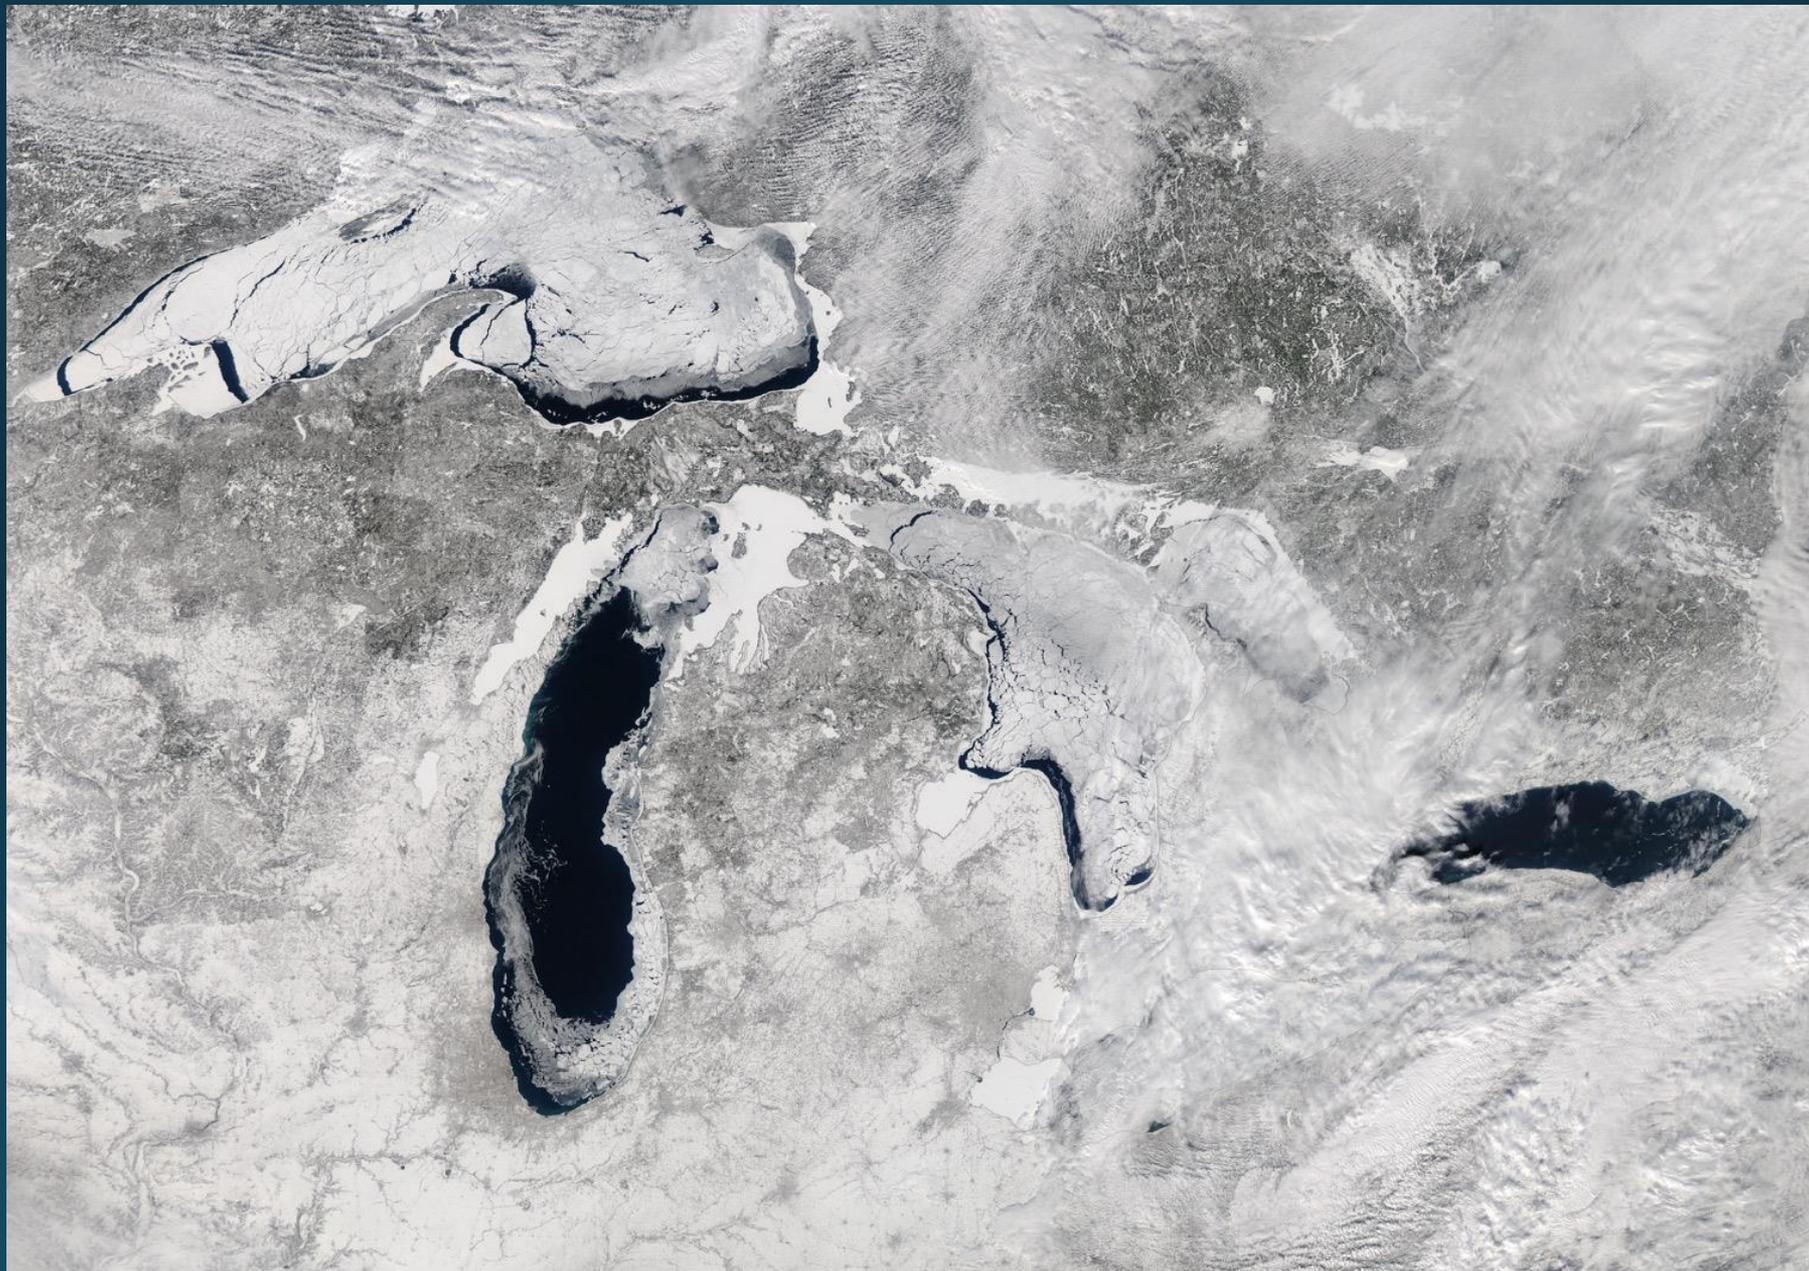

# Great Lakes Coastal Shoreline Dynamics

### Lake St. Clair water jumps one foot, now at record high water levels

Updated May 10, 2019. Posted May 10, 2019

33 927 shares

By Mark Torregrossa | mtorreg@mlive.com

Lake St. Clair is now at the highest level it has ever been recorded at in May.

The U.S. Army Corps of Engineers reports Lake St. Clair's water level went up 12 inches in the past month. This rapid rise in water levels now puts Lake St. Clair four inches higher than it has ever been recorded in May.

# What is Placemaking?

*Placemaking is the process of creating **quality places** where people want to live, work, play, shop, learn or visit.*

The Second Globe Theatre in Auckland, New Zealand

## WHY must we do Placemaking?

People want more urban choices than presently available!

They want more choices in **housing** and **transportation**; they want more variety in entertainment, **cultural** offerings, **green space**, and recreation; they want more **diversity** in ages, races, sexual orientation and cultural heritage; they want Quality Places with *allure, pizzaz* and *interest*.

MS Clipart

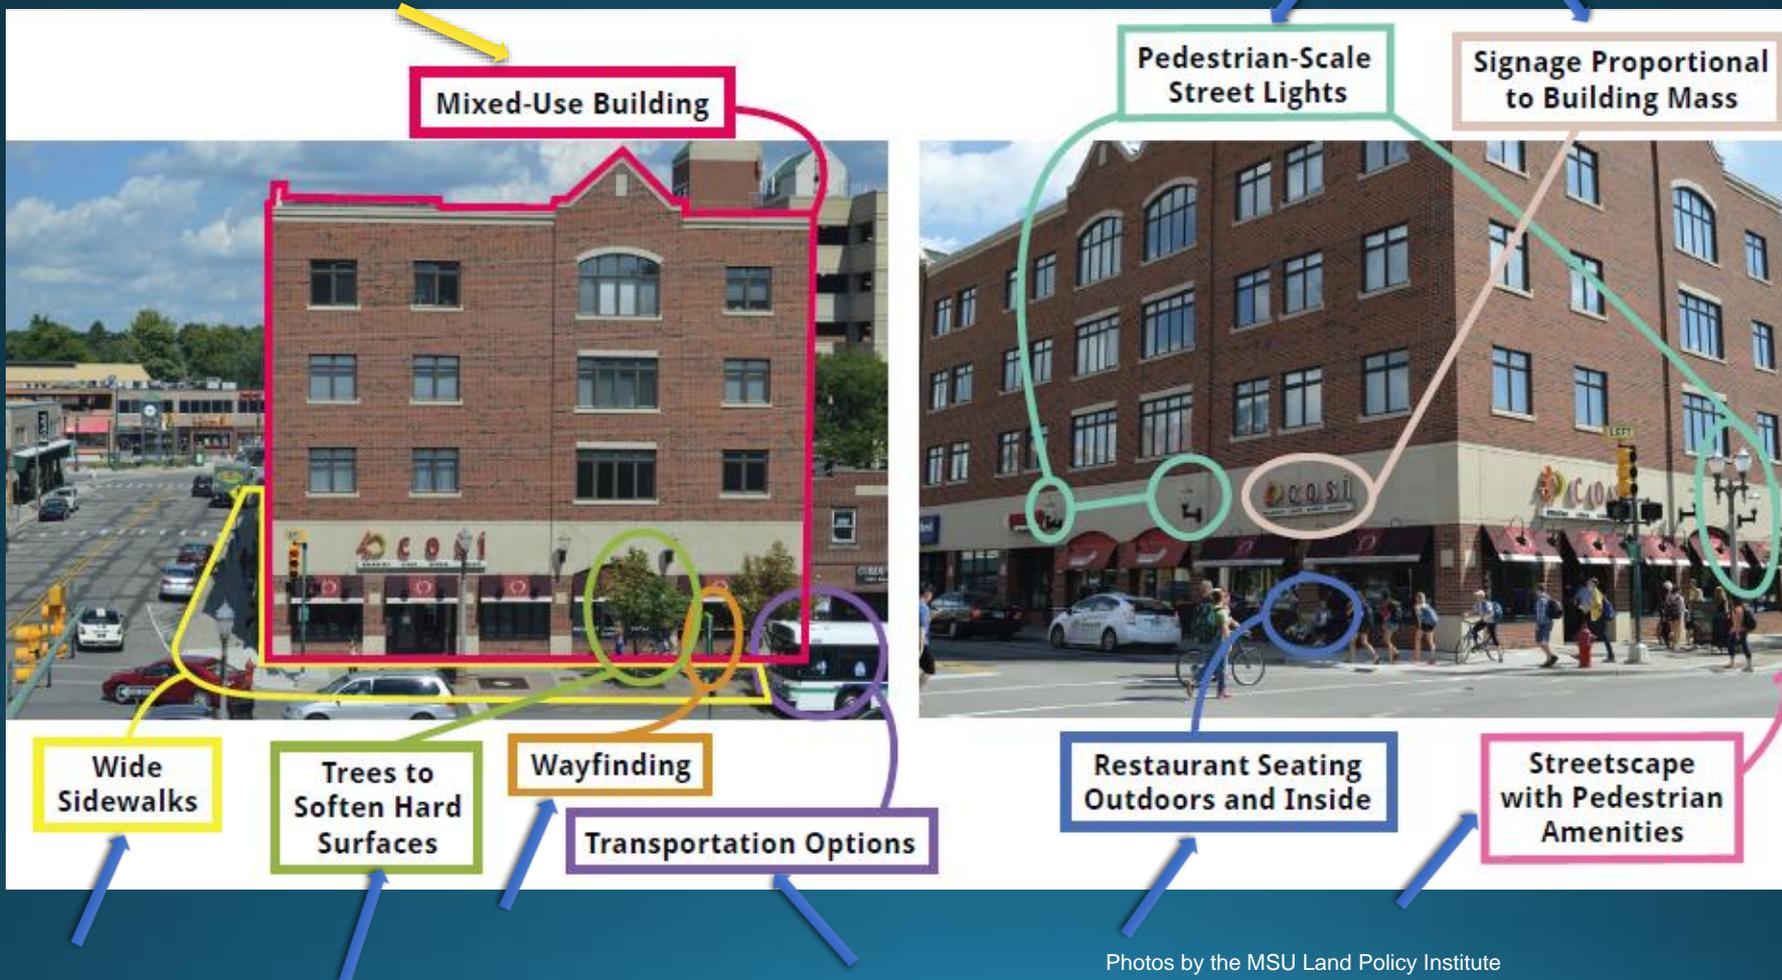

# What are Quality Places?

*Quality places are places with good form, function and social connections.*

# Characteristics of a Quality Urban Place

# Comparison of Walkable Urban with Auto-oriented Sub-urban

Wide sidewalks  
Narrow street  
Projecting signs  
Windows at eye level

Walkable

Auto-Oriented

Deep setbacks

Front parking

Large lots

Many driveways

Lots of pavement

No sidewalks  
(see paths from walkers)

Many large streetside signs

Wide street

# Placemaking Can Help Create Quality Places

So, how does Placemaking create quality places? How can a community go from being auto-dominated to being walkable and having other quality characteristics?

- Most change is ***incremental*** and takes place over a long period of time.
- Sometimes change is ***physical***, like projects that result in new buildings or infrastructure.
- Sometimes it is ***new activity*** in an existing place.
- Sometimes it is ***both***.
- Often it is ***transformational*** as illustrated on the next three slides.

Photo by Steve Price, Urban Advantage.

Graphic by Steve Price, Urban Advantage.

Graphic by Steve Price, Urban Advantage.

# Quality Places are Attractive to Business

- Businesses attracted to: good schools and access to amenities.
- Several quality places – downtown and at nodes along key corridors.
- Largest small towns in region need quality places.
- Start in the Downtown!

Photo by the Michigan Municipal League/[www.mml.org](http://www.mml.org).

# Quality Places Improve Quality of Life for Everyone

- Placemaking is a low-risk proposition.
- New/improved trails/parks, community infrastructure, mass transit, destinations, etc. and more housing choices benefit everyone AND our real

# Planning for Great Lakes Coastal Community Resilience

## Planning Issues & Considerations

### Issues

#### Climate change

- Increased droughts
- Increased heat waves (tempered by lake effects)
- Increased storminess (frequency, intensity)
- Ecosystem storminess/public health effects

**Layered upon natural lake level fluctuations**

**Coastal Hazard Threats**  
(inundation, high-energy waves)

### Additional Considerations

- **Community & social vulnerabilities**
- **Economic sustainability (tourism, facilities, industry)**
- **Fairness (disaster mitigation, recovery, equity in opportunities & impacts)**

# Introduction to Scenario-Based Planning

## Scenario-Based Planning Framework

Management Options	Climate Futures		
	Lucky	Expected	Perfect Storm
Current Development	Scenario 1A	Scenario 1B	Scenario 1C
Current Zoning Build-Out	Scenario 2A	Scenario 2B	Scenario 2C
BMP Build-Out	Scenario 3A	Scenario 3B	Scenario 3C

# Introduction to Scenario-Based Planning

## Helps Navigate Uncertainty

- Plot different, but reasonable future narratives against each other (e.g., climate futures and growth management options).

## Assumptions from available data / info in order to craft these narratives

- For example, use 100 years of observed water level data to estimate future low, “average”, and high water elevations.

## Can complete planning analyses from framework

- Such as, potential structures at risk of flooding under each combination of climate futures and management options (i.e., under each “scenario”).

# Planning Applications: Crafting Climate Futures

## Possible climate futures (*not predictions*)

**Lucky** = low storminess (~ 50-year storm) + low water levels

**Expected** = increased storminess (~100-year storm) + average water levels

**Perfect Storm** = very stormy (~500-year storm) + all-time high water levels

## Varying

- Storminess
- Great Lakes still water levels

# Planning Applications: Crafting Climate Futures

## Derived by combining

- FEMA FIRMs
- Coastal inundation areas (FEMA)

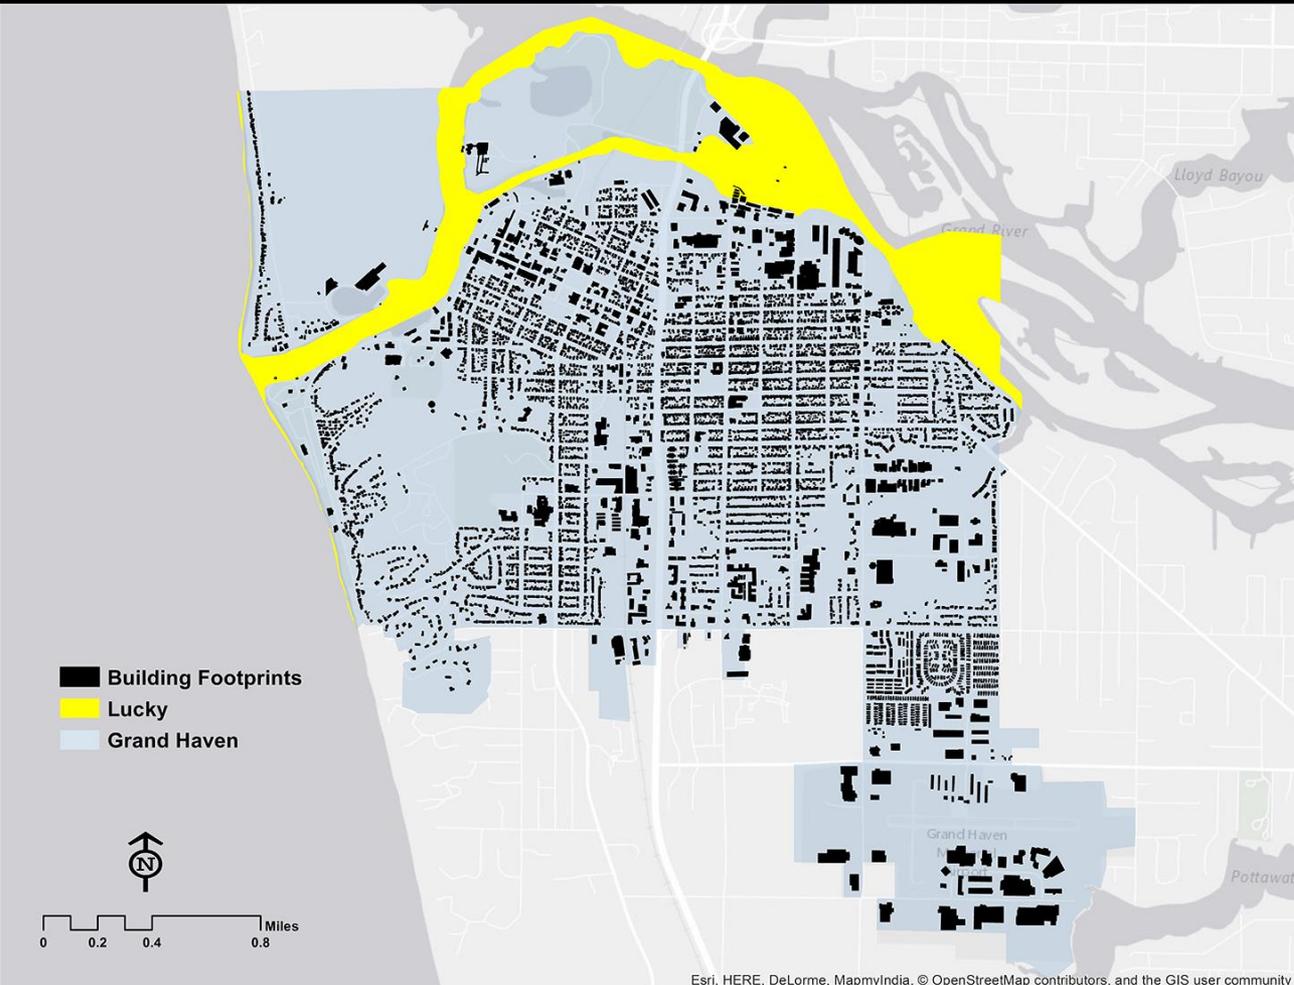

## Coastal inundation areas determined by overlaying

- Great Lakes still water levels (GLERL/NOAA) + storm surge elevations (MTU)
- Topography of coastal community (available DEMs)

# Planning Applications: Crafting Climate Futures

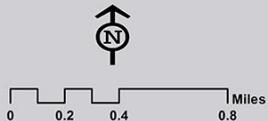

## Lucky

- All-time low lake water levels, no wave action (i.e., no VE)
- Current FIRM floodway + Proposed 2% coastal base flood elevations (“coastal floodway”)
- Planning (~50-year) storm = current 2% storm

The map displays the town of Grand Haven, Michigan, with building footprints shown as black polygons. A yellow shaded area, labeled 'Lucky', highlights a specific region within the town, primarily along the northern and eastern waterfronts. The rest of the town area is shaded in light blue, labeled 'Grand Haven'. The map includes geographical features such as Grand Haven Bay, Grand River, and Lloyd Bayou. A legend in the bottom-left corner identifies the symbols for Building Footprints (black), Lucky (yellow), and Grand Haven (light blue). A north arrow and a scale bar (0 to 0.8 miles) are also present in the bottom-left corner.

■ Building Footprints  
■ Lucky  
■ Grand Haven

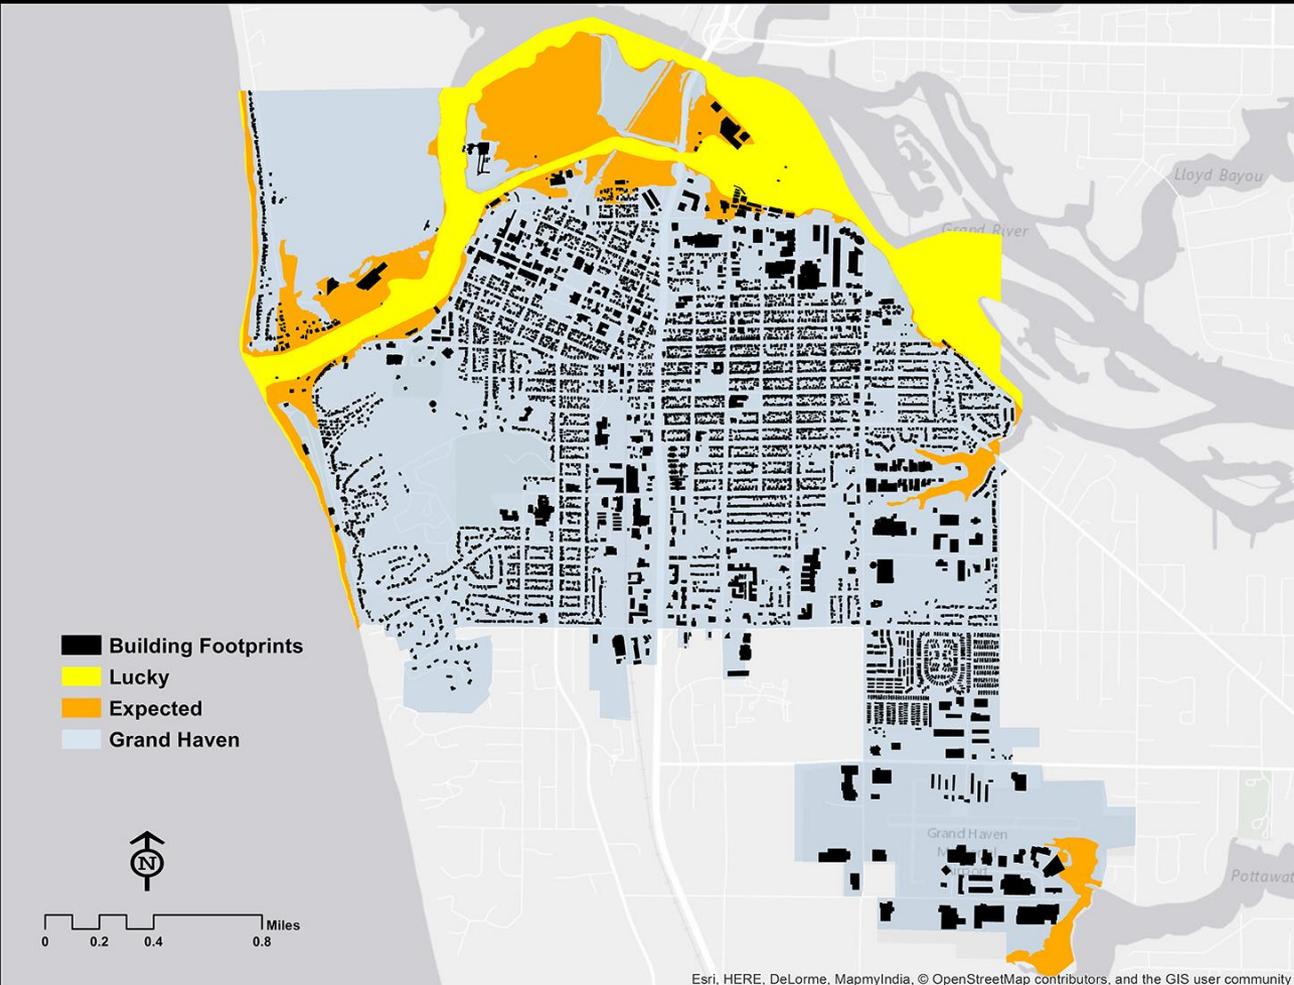

Esri, HERE, DeLorme, MapmyIndia, © OpenStreetMap contributors, and the GIS user community

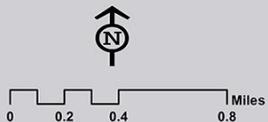

# Planning Applications: Crafting Climate Futures

## Expected

- Long-term mean lake water levels
- Current FIRM base flood elevations (“coastal floodplain”) + elevation-derived storm surge extent
- Planning (~50-year) storm = current 1% storm + VE (more stormy)

Building Footprints  
Lucky  
Expected  
Grand Haven

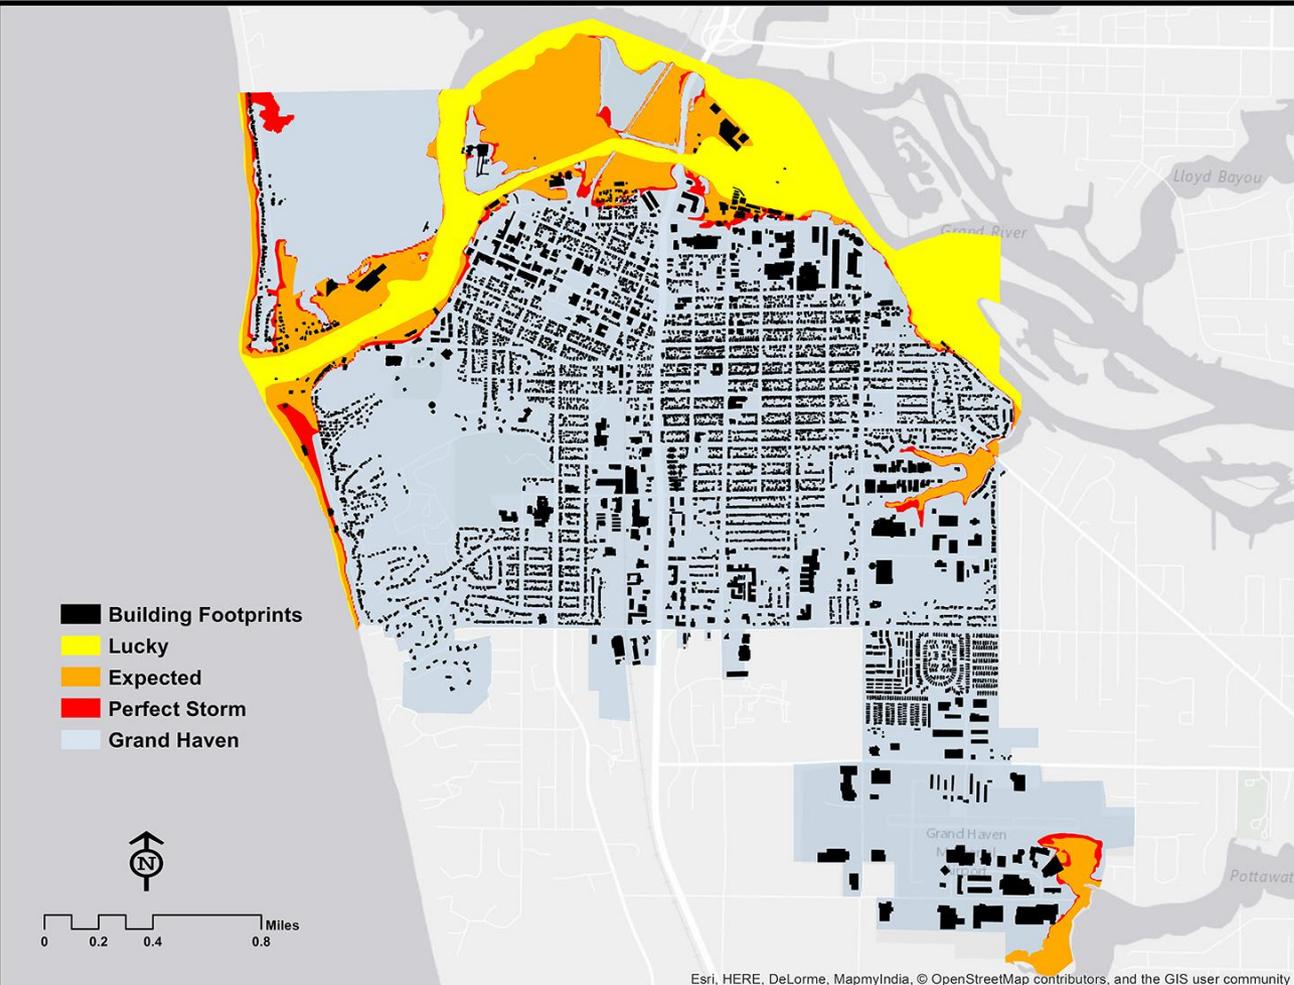

Esri, HERE, DeLorme, MapmyIndia, © OpenStreetMap contributors, and the GIS user community

# Planning Applications: Crafting Climate Futures

## Perfect Storm

- All-time high lake water levels
- Current mapped .2% flood area (Shaded-X) + elevation-derived storm surge extent
- Planning (~50-year) storm = current 0.2% storm + VE (super stormy)

■ Building Footprints  
■ Lucky  
■ Expected  
■ Perfect Storm  
■ Grand Haven

Esri, HERE, DeLorme, MapmyIndia, © OpenStreetMap contributors, and the GIS user community

# Planning Applications: Mapping Management Options

Possible build-out futures (*not predictions*)

1. **Current Development** = current structures & infrastructure
2. **Current Zoning Build-Out** = current structures & infrastructure + full build-out under current zoning code
3. **BMP Build-Out** = current structures & infrastructure + build-out if BMP's are adopted

## Varying

- Zoning regulations & other growth policies
- Allowable development in or near high risk flood areas

# Planning Applications Mapping Management Options

## Derived By

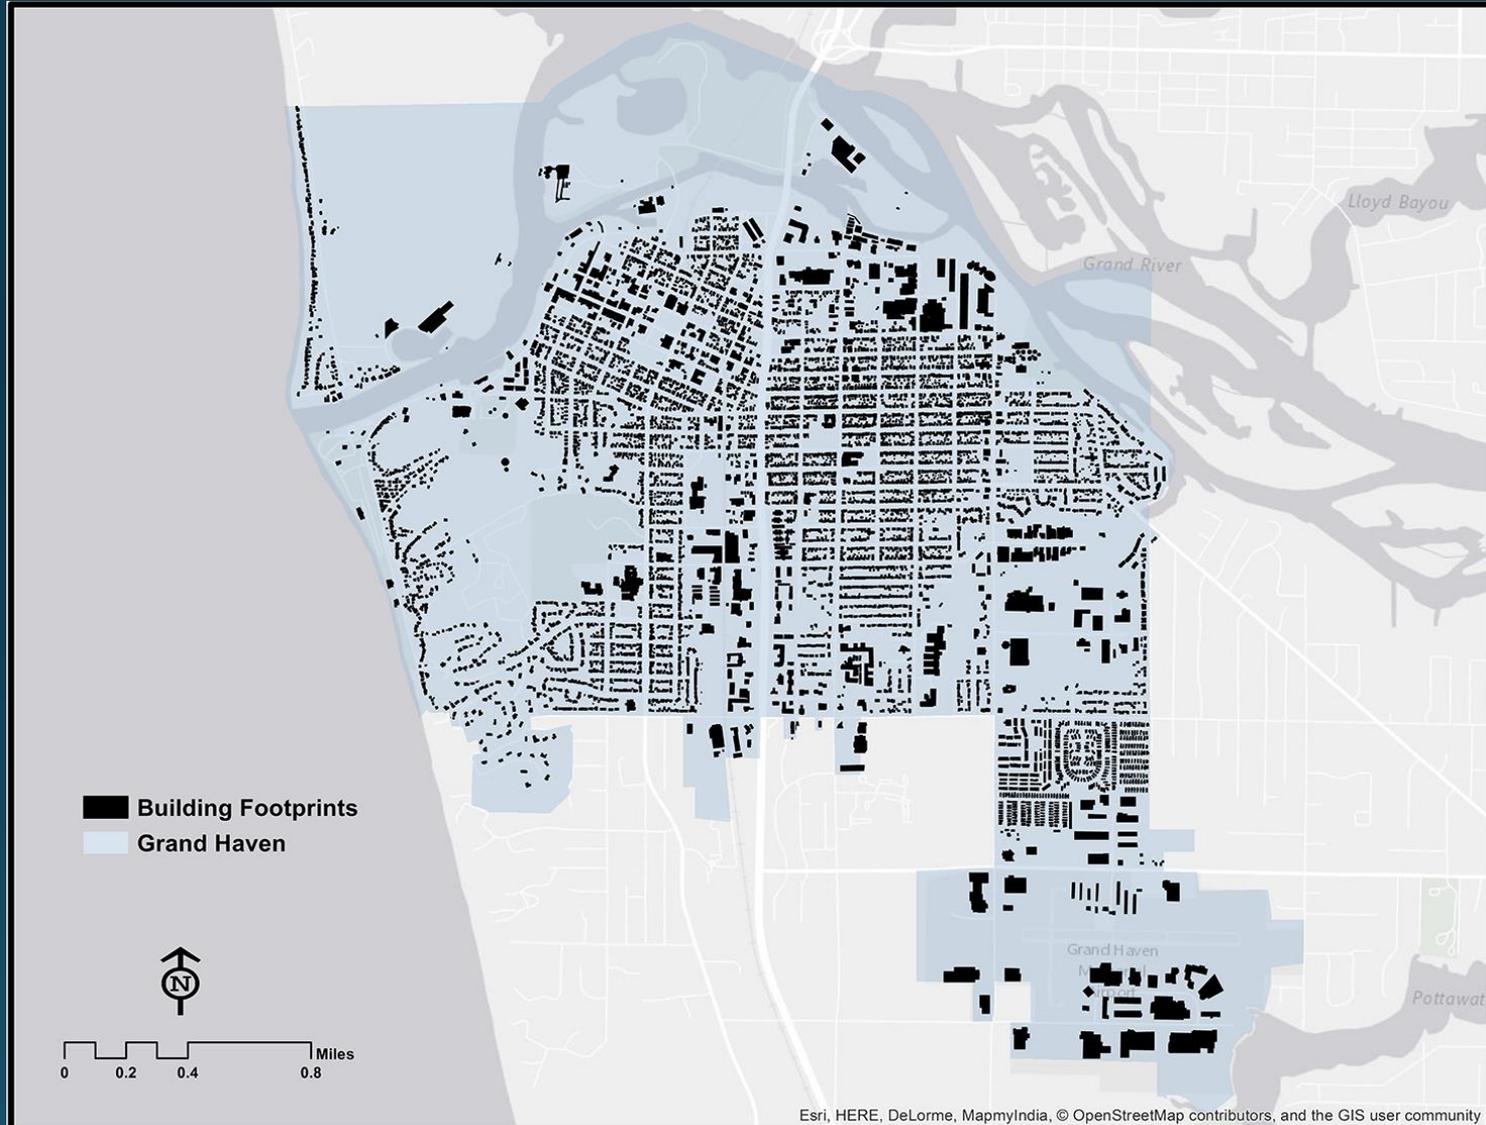

- Community master plan, zoning ordinance, and other ordinances (e.g., stormwater management ordinance)
- Spatial avoidance best management practices

## Build-Outs Mapped With

- CommunityViz Software (an ArcGIS extension program)

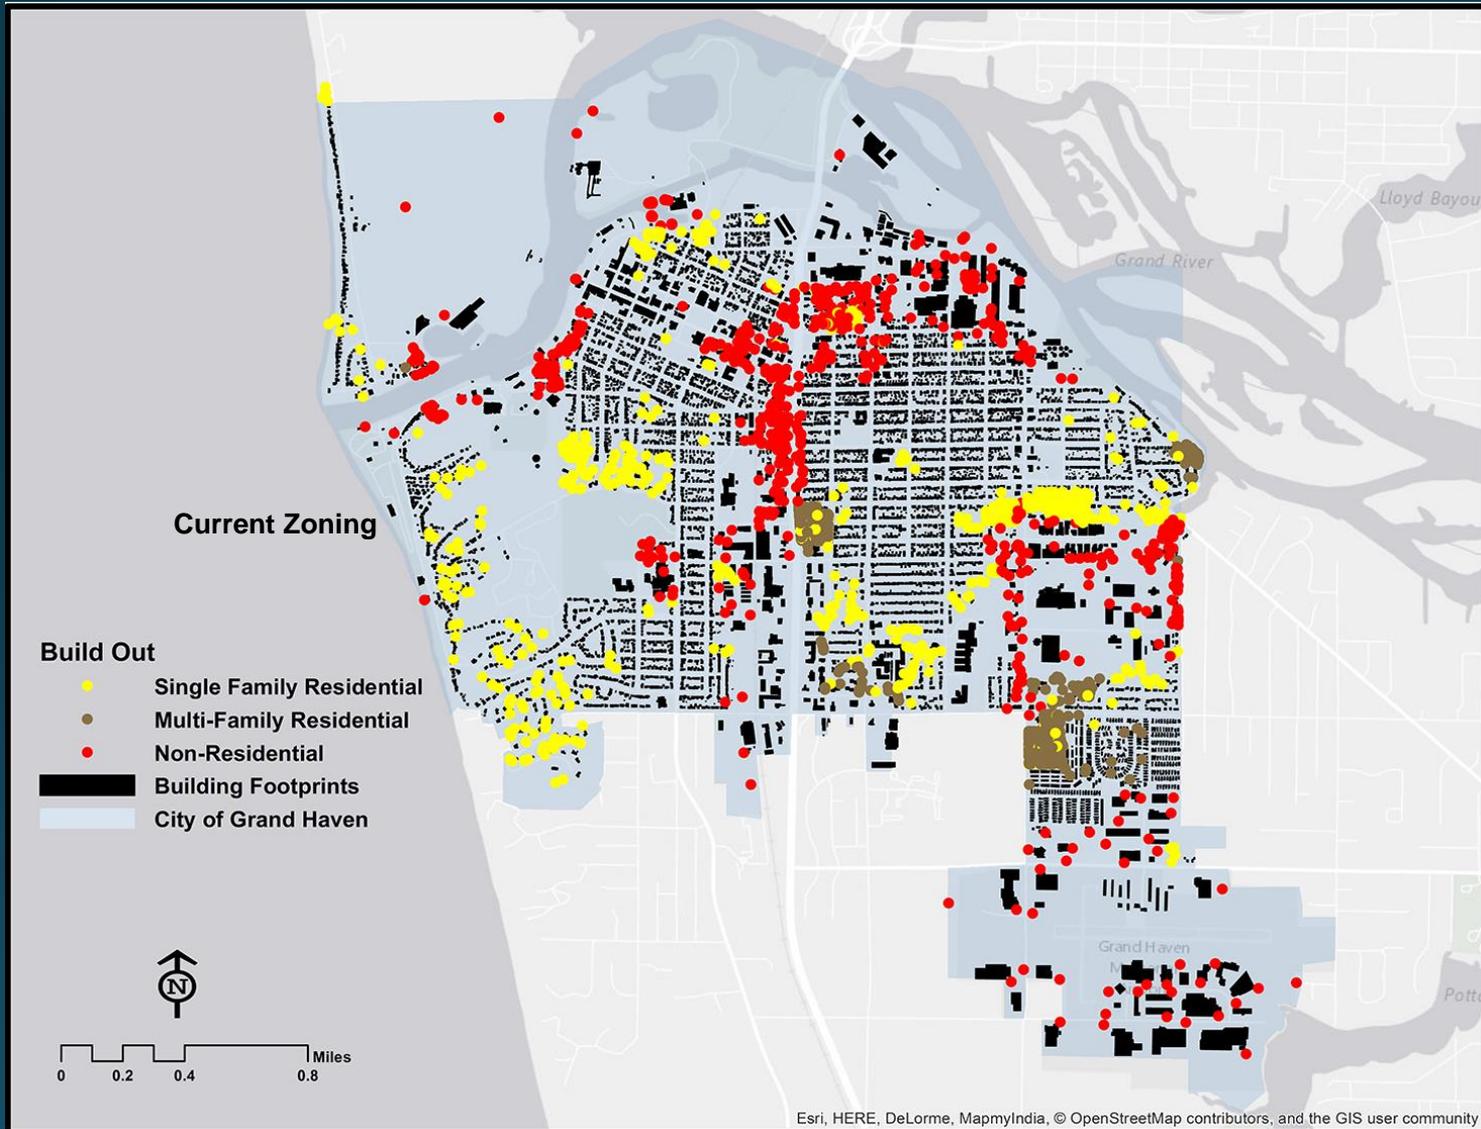

# Planning Applications

## Mapping Management Options

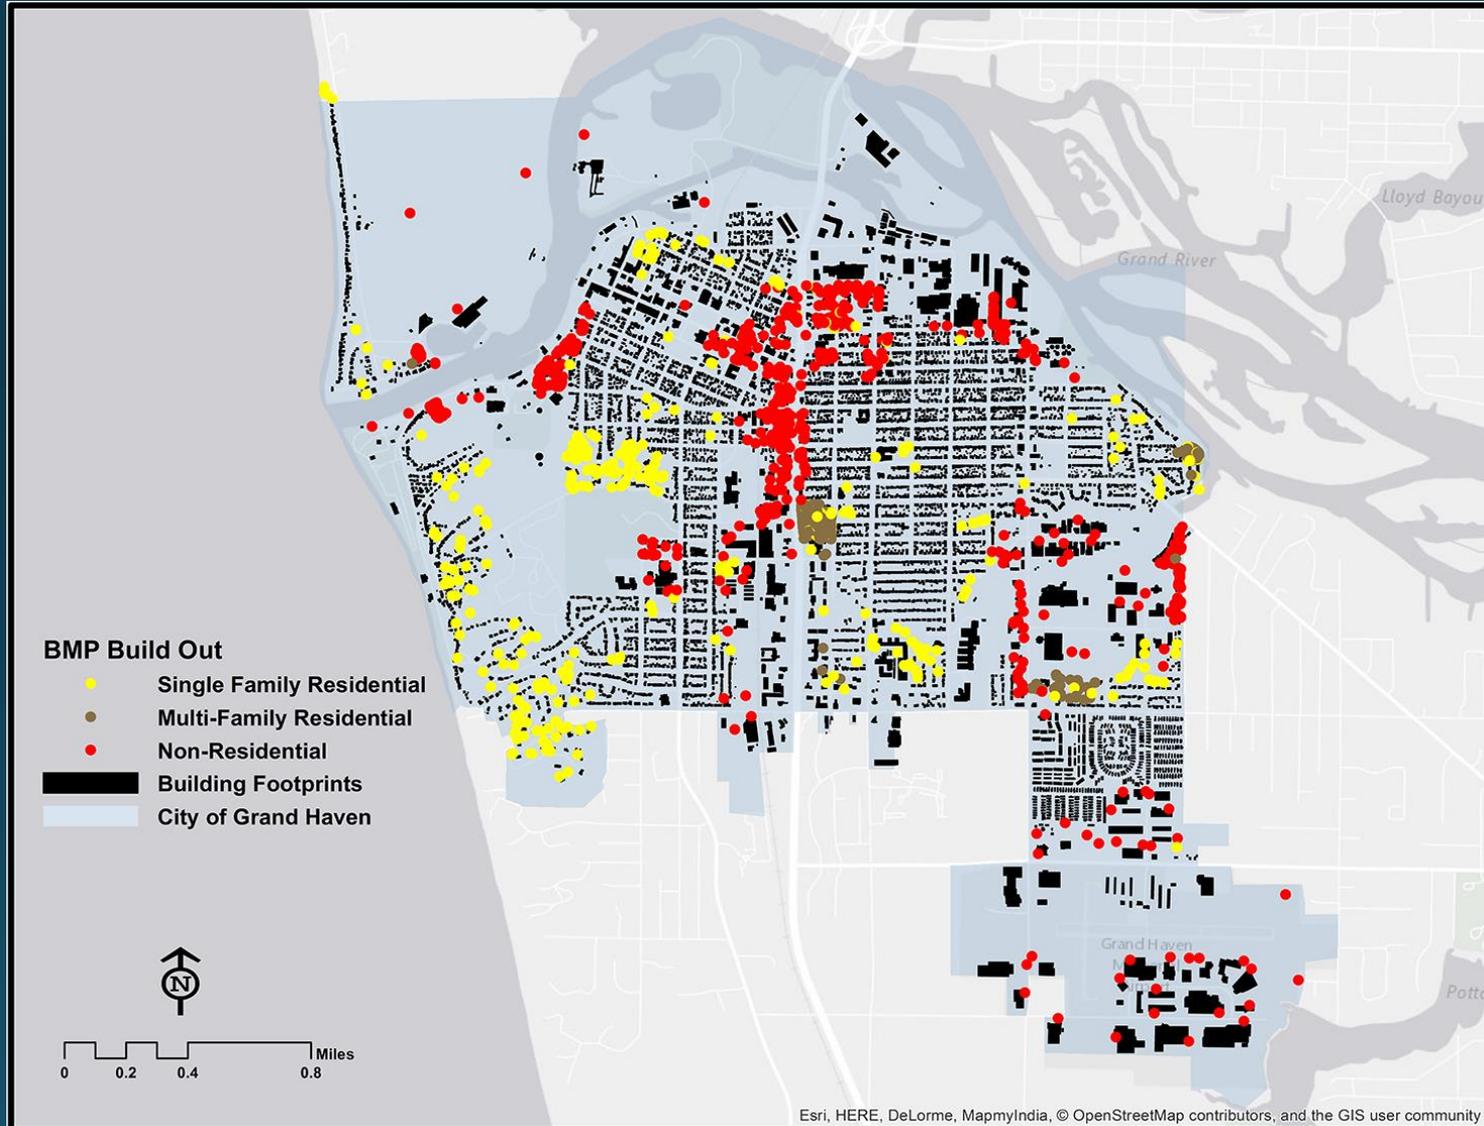

# Planning Applications

## Mapping Management Options

# Planning Applications

## Mapping Management Options

# Using Coastal Data + Scenario-Based Planning to Inform Local Planning

## Potential Structures at Risk in Grand Haven

	Lucky	Expected	Perfect Storm
Current Development	17	142	189
Current Zoning Build-Out*	+2	+182	+234
BMP Build-Out*	+2	+25	+41

\* Additional potential structures at risk

# Activity 3

Project prioritization

# Next Steps

1. We will review tonight's input and put it into a summary document
2. Week of October 21 (Date & Location TBD), join us for a joint planning commission meeting to begin drafting goals and objectives
3. Attend planning commission meetings to provide more input into the master plan update
